

# Running an application for testing on Repl.it

## 1. Fork a Repl on Repl.it

**Step 1:** Navigate to <https://replit.com/>. You need to register, if you don't have an account. It's really easy, so we won't explain the registration process.

**Step 2:** Log in and navigate to **the app that you want to fork**.

**Step 3:** Hit the blue "Fork" button on the upper right corner.

**Step 4:** A pop-up window will appear. Give your app a name, set privacy to public and click "Fork Repl".

Fork Repl

Name

16 / 60

TaskBoardJS\_V.02

Description

96 / 1000

Trello-style task board, holding tasks in boards (Open, In Progress, Done): JS App + RESTful API

Privacy

Public

Private

Anyone can view and fork this Repl.

Fork Repl

**Step 5:** Give it some time to load and when a green button appears in the top middle of the screen click it. This should open the application's webview.

**Step 6:** If you want to open the app on new tab, click on the small  button on the top right corner.

**Step 7:** This should open the app in a new tab and you are ready to go.
